Honeybees

Honeybees play a key role in the human and natural world ...
they accomplish a quarter of the pollination needed for
all fruit produced for human consumption..

They work very hard in a highly structured order...
They are very meticulous in building their intricate hives
and have a sense of accomplishment!

Honeybees have a strong social behavior and work
for the success of the colony living in the hive ...

They protect the queen bee and swarm out
to drive the intruders away...

Honeybees produce sweet honey!

HRbees have a similar nature and behavior!
